Barbieri electronic introduces new model Spectro LFP qb Digital Press edition for color measurement in professional digital printing

Barbieri electronic, market leader of color measurement devices for digital large format printing, introduces the new spectrophotometer **Spectro LFP qb Digital Press edition**, specifically designed for color management in applications with reflective paperlike materials with smooth and finely textured surfaces in various digital printing applications like packaging printing.

The Spectro LFP qb Digital Press edition offers fully automated reflection measurements for materials up to 20 mm with its variable 2-6 mm measurement aperture. It is made to measure paper and paperlike material and a variety of packaging materials like carton and corrugated. Thanks to its precise color measurement technology, including the Barbieri QB technology, the Spectro LFP qb Digital Press edition enables high accurate color measurement for the calibration and profiling of digital printing systems.

The outstanding features of the Spectro LFP qb Digital Press edition include:

Fully automated reflection measurements

This feature ensures accurate color measurement of reflective materials. Starting with automated chart positioning, the Spectro LFP qb Digital Press edition operates fully motorized.

A wide range of digitally printed materials for graphic arts and packaging

The Spectro LFP qb Digital Press edition is ideal for a wide range of materials, including cardboard, paper, labels, and many more. Providing a comprehensive solution for businesses in a variety of industries in graphic arts and packaging. Its variable 2- and 6-mm measurement aperture adapts to a wide range of materials, even thick materials up to 20 mm.

Wireless spot color measurements

With its removable measurement head, the Spectro LFP qb Digital Press edition transforms into a handheld wireless spot color measurement device.

„I am excited to unveil the Spectro LFP qb Digital Press edition, a new dedicated edition designed specifically for the digital printing market in graphics and packaging. This innovative model builds on the world-renowned Spectro LFP qb, offering features tailored to meet the precise needs of this industry. This launch represents our commitment to advancing technology for top-tier performance in graphic arts digital printing.“ states Stefan Barbieri, CEO at Barbieri Electronic
